Secure Data Operation (Option 7)

For highly secure data handling requirements, Secure Data Option 7 prevents the storing of measurement setup or data information onto any internal file storage location. Instead, setup and measurement information is stored ONLY to the external USB memory location. A simple factory preset prepares the Field Master Pro for transportation while the USB memory remains behind in the secure environment. The Field Master Pro cannot be switched between secure and non-secure operation by the user once configured for secure data operation. With this option enabled, the user can also choose to blank the frequency, amplitude and bandwidth values displayed on the screen by turning on Secure Display toggle included in Advanced settings of the instrument. Note that the SCPI command interface won't be supported when Option 7 is installed and installing Secure Communication Option 17 is required to enable the SCPI interface.

Secure Communication (Option 17)

When connecting the instrument to a network, Option 17 creates a secure tunnel. Some ports will be closed, and data gets encrypted as shown in the table below. Security certificates can be loaded onto the instrument to establish a secure connection. Remote access to the MS2090A ports can be password protected. The USBTMC connection interface does not work on instruments installed with Secure Communication Option 17.
